**Essential Diabetes Leadership**

Laurence D. Chalem 2009-09-05

Incredibly accessible and straightforward, Laurence D. Chalem's second book, Essential Diabetes Leadership, is the quintessential overview of diabetes. Whether you or a loved one has recently been diagnosed with diabetes or whether it is something you have managed for years, this book provides insight on how to live optimally with diabetes. In this powerful and empowering treatise, the author traces data from the last three centuries and explains where to find credible information from all channels of information. Meticulously researched and fully annotated, Chalem's analysis also investigates the most influential diabetes study in the world. Here is where questions are answered and diabetics become the leaders of their wellness. Nearly the entire diabetes treatment industry is biased in favor of their particular interests and that-hands down-the optimal treatment of diabetes is a diet low in carbohydrates, high in fat, and one that takes the middle ground in regards to protein.

**Handbook of Diabetes Medical Nutrition Therapy**

Margaret A. Powers (RD.) 1996

The focus of this revised book is to strengthen the diabetes nutritional management principles that empower dieters to expand their roles, and to update research and techniques that describe state-of-the-art diabetes management. Pertinent information resulting from advanced glucose monitoring practices/techniques and new food ingredients such as artificial sweeteners and fat replacers are discussed. "The Handbook of Diabetes Medical Nutrition Therapy offers health care providers a complete guide to diabetes management. It is also refreshingly specific, making it a handy tool for dietitians, dietetic technicians, and diabetes educators." -- Journal of the American Dietetic Association (97:2, February 1997) "Overall the text is thorough, clear and well-written by credible RDs and MDs...The syllabus enables the reader to locate points of interest quickly rather than sifting through a large number of pages. I recommend the book to anyone providing care to patients with diabetes." -- Susan Nolan, Barrie Community Health Centre, Barrie, ON "Anyone studying For The certified diabetes educator examination would benefit from a close review of this book. Just took the exam and wish I had used Handbook of Diabetes Medical Nutrition Therapy as an adjunct To The core curriculum guide offered with the examination." -- Sari Edelstein, PhD, RD Health Maintenance Organization-Based Private Practice Miami, FL

**Women and Healthy Aging**

Dianne Garner 2014-04-04

This book explores what is known about healthy living among older women, emphasizing overcoming illness and adversity. Women and Healthy Aging focuses on common age-related changes and illnesses that frequently occur among women in the later years. It describes these diseases and changes, provides treatment options, highlights preventative measures, and offers suggestions for continued productive living as women age. Since some of the barriers to effective diagnoses, treatments, and implementation of productive living strategies are institutional, two chapters explore public health policies which affect older women and discrimination against older women in health care. This informative book assists health care professionals in the provision of services to older women, helping these professionals become catalysts for enabling older women to "overcome adversity" and continue to lead healthy, productive lives. Many of the most common diseases and age-related changes that affect older women are not "curable." In a society which stresses "cure" as the appropriate role for health care professionals, what are these professionals to do with the legions of older women for whom "cures" may not be possible? How can they assist older women in preventing or slowing the occurrences of diseases and age-related changes? When prevention or cure is not possible, how can they assist older women in living productive, meaningful lives? By addressing specific conditions and diseases, Women and Healthy Aging gives readers focused information on current treatment options, preventative strategies, and suggestions for productive living which are disease- or condition-specific and target older women. Some of the topics covered include menopause, osteoporosis, arthritis, diabetes, heart disease, cancer, Alzheimer's disease, and sensory loss. Practitioners, educators, and students in the fields of nursing, social work, physical therapy, occupational therapy, gerontology, human services, and medicine will find this book an illuminating source of valuable information and insights into the aging process for women.

**Connecting the Dots**

**Functional Insulin Treatment**

Kings Howerka 2012-12-06

Functional Insulin Treatment (FIT) is the most effective method of treatment for type 1(insulin-dependent) diabetes available today. Whether with an insulin pump or with multiple daily injections, the diabetic patient trained in FIT is able to dose his insulin on the basis of actual function so that he achieves near-normoglycemia and the freedom to eat when, what and how much he wants. The goal of FIT is to adapt the therapy to the lifestyle of the patient. This book creates a common basis for communication among therapists (physicians, nurses, dietitians, diabetes educators) and patients involved in FIT. It clearly defines the principles of the treatment and describes the contents, media and techniques of a practical program for training patients to carry it out.

**Diabetes**

Richard K. Bernstein 1981

**Methods in Diabetes Research**

Joseph Larner 1986

The aim of Methods in Diabetes Research is to provide ready access to the wide array of investigative techniques applicable to research in this area. The first volume, published in three parts, was devoted to laboratory techniques. The present volume deals with clinical methods. It is divided into three parts, i.e.
pathophysiology, therapy and complications with a total of 35 contributions by eminent workers in the field. In many areas of clinical research, adequate methods do not exist, and included in this volume are discussions on the kinds of methods needed and the difficulties inherent in their development. In addition, several contributions go into considerable detail describing the problems of dealing with human subjects and hospital administrators. Although not usually considered ‘scientific’ these issues often limit the productivity of clinical investigations.
