The influence of this is evident in the shaping of historical events, patterns that either enhance or inhibit the development and growth of human societies.

A Future for Archaeology: Robert Layton 2006 Over the last thirty years issues of culture, identity and meaning have moved out of the academic sphere to become central to politics and society at all levels, from the local to the global. Archaeology has been at the forefront of these moves towards greater engagement with the non-academic world, often in an extremely practical and direct way, for example in the disputes about the repatriation of human burial. Such disputes have been central to the recognition that previously marginalized groups have rights in their own past which are important for their future. The essays in this book look back at a number of the key debates in recent archaeological theory, and show how they have continued to impact and influence current and future archaeological research.

Archaeology and Economic Development - Paul Burtenshaw 2017-12-02 "Nowhere in archaeology is the gap between theory and practice more evident than in its ambivalent engagement with economic development. This groundbreaking volume assembles practicing archaeologists, economists, and NGO-officials in an extensive exploration of the theoretical, practical and ethical issues raised by archaeologists' use of cultural heritage to support economic development. The first chapters consider the problem of articulating the value of tangible and intangible heritage when economic measures alone are inadequate. Subsequent chapters present regional perspectives on archaeology and development, and present a host of case studies from around the globe that describe archaeologists' development projects, including some that are successful and others that are less so. These studies both suggest best practices in the implementation of development projects and illuminate the obstacles to success created by political conflict and competing human needs. Ethical issues and practical considerations converge in chapters that explore the role that members of local communities should play in the design, management and governance of archaeological and heritage resources. In this volume, archaeologists and heritage professionals will encounter a thought-provoking international discourse concerning the path forward for archaeology as the field engages with economic development."

Cultural Anthropology - JoAnn Jacoby 2007 An annotated bibliography of print and electronic resources central to the field of social and cultural anthropology.
